In this guide

01 Check for updates

02 Uninstall 67 Cleaner

01 Check for updates

Choose **67 Cleaner → Check for App updates** in the menu bar. Follow the prompts when a new version is available. Threat definitions update separately. Open **Settings → Updates & Startup** to check their status. If an update keeps failing, capture the exact message and app build from **67 Cleaner → About 67 Cleaner**.

An example update prompt. The version and build numbers depend on the release available to your Mac.

02 Uninstall 67 Cleaner

1. Open the installed app from **Applications** and choose **67 Cleaner → Uninstall…** in the menu bar.
2. Review the list of what will move to Trash. The app keeps settings, quarantine and recovery data by default. Leave those defaults in place if you may need that data again.
3. Confirm the plan and review its result. If macOS refuses to move the app, record the error and contact support. On a managed Mac, ask your administrator for help.

Before emptying the Trash, make sure you no longer need any of the moved items. For subscriptions or activation questions, see the license guide.

NEED MORE HELP?

We are here when the guide is not enough.
