Trojan Scanner with the Pro appearance. Manual scans, What changed and Protection history are also available in Free.

01 Choose an official source

- **Google Play:** open Trojan Scanner on Google Play and follow the install controls offered for your device.
- **Gridinsoft website:** use the official Trojan Scanner product page. Follow Android's confirmation prompts for its APK. If Android asks to allow installation from that browser or file manager, grant it only for the trusted installation source.

Trojan Scanner supports Android 6.0 and later on compatible devices. Use the version shown in your installed app or its store page; avoid unofficial download mirrors.

02 Open the scanner

1. Launch Trojan Scanner and let the initial threat database download finish.
2. Allow notifications if you want background progress and result alerts.
3. Tap **Start**. If asked about file access, choose whether to include downloaded APKs and archives or check installed apps only.

See your first scan for result and cleanup guidance. You can also choose Check a file from the menu before opening a download.

03 Choose the extras you want

The optional **Gridinsoft account** unlocks free cloud checks after sign-in and consent. It is separate from a Google Play purchase.

Pro adds Anti Spy, link checking, scheduled scans and automatic database updates. Explore Free versus Pro before choosing the annual plan. Paid access and price are shown in the app through Google Play.

04 Keep your installation current

Update from your installation source and refresh the threat database separately. Do not uninstall the scanner just to apply an update: local reports and preferences may be lost. Follow the update guide.

NEED MORE HELP?

We are here when the guide is not enough.

Visit the Gridinsoft Support Center for current product guidance or submit a support request with the details of your case.
