

Download and install Trojan Scanner for Android

Gridinsoft Help Center

Trojan Scanner protects your phone from trojans, adware, spyware, and other threats. Installation takes under a minute.

Quick install (recommended)

- Open Google Play on your Android device.
- Search Trojan Scanner and choose the app by Gridinsoft.
- Tap Install, then Open.
- When prompted, Allow access to files so the app can scan downloads and storage for threats.
- Tap Start scan to check your device right away.

Prefer a shortcut? You can also open the app's Play Store page with a QR code

What permissions we ask for (and why)

- Files & media - lets Trojan Scanner scan downloads and folders for malicious items.
- Notifications (optional) - to alert you when a scan finishes or a threat is found.

You can change these anytime in Settings -> Apps -> Trojan Scanner -> Permissions.

Keep it up to date

In Google Play -> Trojan Scanner, tap Enable auto-update so you always have the latest fixes and threat definitions.

If install doesn't start

- Stuck on "Pending" - pause other Play downloads, check storage space, and try again.
- Can't find the app - confirm you're using a standard Google account and you're online.
- Play Protect warning - make sure the publisher is Gridinsoft and you're on Google Play.

Next steps

- Review Settings to choose scan type, auto-updates, and how long to keep reports.
- See: [Using Settings in Trojan Scanner](#) (link to your settings article).
