Trojan Scanner with the Pro appearance. Manual scans, What changed and Protection history are also available in Free.

01 Start with useful protection for free

- **Scan your device:** check installed apps and, with file access, downloaded APKs and archives in accessible shared folders.
- **Check before you open:** choose a file, APK or archive for a separate check without installing it.
- **Check new apps automatically:** new and updated apps can be checked in the background using the database on your device.
- **Understand the result:** see findings, incomplete checks and saved activity in Protection history.
- **See what changed:** review newly observed apps, special access and findings since a completed device check.
- **Add free cloud checks:** sign in to a Gridinsoft account and choose which optional cloud checks to enable.

02 Let Pro do more of the routine

Pro adds **Anti Spy** to highlight suspicious combinations of app capabilities, **link checks** before you open a suspicious site, **scheduled scans** and **automatic threat database updates**. The Pro interface also gives the scanner a distinctive darker appearance.

Choose the features that matter to you and enable them in Pro settings. See the Free and Pro comparison for a clear breakdown.

03 Know what each check tells you

A threat detection, a potential permission risk and an incomplete check mean different things. Trojan Scanner explains the available results and asks before removing an ordinary app or deleting a file. A result with no detections applies to the checks that completed; it cannot guarantee that a device or file is safe.

The scanner does not read your messages automatically, monitor browser traffic or provide a VPN. Web Protection is a separate Gridinsoft product.

04 Choose your next step

- Run your first scan
- Check a file or archive
- Explore Anti Spy
- Read results, history and What changed

NEED MORE HELP?
