

# Features and capabilities of Trojan Scanner for Android

Gridinsoft Help Center

Trojan Scanner helps you find and remove malware, risky apps, and junk you no longer use-fast and with minimal setup.

## Core protection

- On-demand scans of memory, running apps, installed apps, and autorun items.
- Threat definitions updated automatically (manual update available).
- Clear actions on results: Remove, or Ignore.

## Scan types

- Quick scan - fast check of common risk areas; great for daily use.
- Deep scan - full storage and apps; use weekly or when you suspect issues.
- Scan after reboot (optional) - catch threats that try to start with the device.

## Reports

- A summary after every scan with detections, items scanned, and duration.
- History in Reports; export/share logs with Support if needed.

## Applications Usage Statistics

Spot apps you never use and free up space.

- See last launch and total time used per app.
- Filter: Installed, but never used; Launched before [date]; All, oldest first.
- Select and uninstall in bulk.

## Cure My PC (remote cleanup helper)

Use your phone to help clean a Windows PC that can't easily download tools.

- On your phone, open Cure My PC in Trojan Scanner.
- Follow the steps to prepare Trojan Killer [Portable] on a USB stick.
- Connect to the infected PC and run the tool there.

## Simple navigation & controls

All tools are one swipe away:

- Scan, Reports, White List, Quarantine, Threats List Info, Cure My PC, Settings, About, Exit.

## Settings you can tweak

- Scan after reboot
- Update threats list (auto/manual)
- Scan type (Quick/Deep)
- Wi-Fi only updates
- Quarantine: Remove files after [period]
- Keep Reports duration
- Sounds/notifications

## Privacy notes

- The app uses usage statistics only to compute last launch/total time in the Apps list.
- No personal documents or browsing content are collected.
- Logs are shared with Support only if you choose to send them.

## When to use what

- Quick scan: daily routine.
- Deep scan: after installing many apps or when suspicious behavior appears.
- Apps Usage: monthly storage tidy-up.
- Cure My PC: when a Windows PC is too infected to download tools.
