

# How do I exclude a file or folder from scans?

Gridinsoft Help Center

In the app, go to Tools -> Ignore list. Click + and add the item you trust (file, folder path, or connection). The entry will appear in the list under System (files/folders) or Internet (connections).

- To quickly find an entry, use the search box or the All filter.
- To remove an exclusion, select it and click - (or uncheck it if you only want to disable it temporarily).

Note: Exclusions reduce protection. Only ignore items you trust and remove them if they're no longer needed.
