

# How do I make Gridinsoft Anti-Malware start automatically with Windows?

Gridinsoft Help Center

Turn on any built-in protection that requires the app to load at startup:

- Settings -> General -> Startup -> System startup scan
- Protect -> Internet Security
- Protect -> On-Run protection
- Protect -> Removable Device

If at least one of these options is enabled, Gridinsoft Anti-Malware will launch automatically when Windows starts.

Tip: If Windows still prevents startup, open Task Manager -> Startup and make sure Gridinsoft Anti-Malware is set to Enabled. To stop auto-start later, just turn these options off.
