

How do I run my first scan and handle the results?

Gridinsoft Help Center

Short answer: Open Trojan Scanner -> tap Start -> follow actions on the results screen.

Steps

- Open the app and tap Start.
- If prompted, Allow files access so downloads and storage can be scanned.
- Wait for the progress bar to finish.
- On the results screen, choose for each item: Remove, Quarantine, or Ignore (avoid Ignore unless you are sure).

What the actions do

- Remove: Deletes the file/app. Best for confirmed threats.
- Quarantine: Isolates so it cannot run. You can review/restore later.
- Ignore: Leaves it as is. Not recommended.

If nothing is found but the phone acts weird

- Update the threats list -> run a Deep scan (Settings -> Scan type).
- Review recently installed apps and browser extensions.
- Scan type: Quick (daily) / Deep (weekly).
- Quarantine: Remove files after: Auto-clean old items.
- Keep reports: Choose how long reports are stored.
