

Post-Installation Configuration

Gridinsoft Help Center

After successful installation, optimize your protection with these initial configuration steps:

Initial Setup Tasks

- Launch Gridinsoft Anti-Malware Double-click the desktop shortcut or find it in the Start menu Allow the program to initialize and load its components
- Update Virus Database Click the Update tab to check for the latest threat signatures Allow the program to download current virus definitions This ensures protection against the latest threats
- Run Initial Scan Perform a Quick Scan to check your system's current status Review and act on any detected threats This establishes a security baseline for your system
- Activate Real-Time Protection Navigate to the Protection tab Ensure all protection modules are enabled Configure protection settings according to your preferences

License Activation

If you have purchased a license for Gridinsoft Anti-Malware:

- Navigate to the Info tab
- Click "If you already have a license"
- Enter your activation key exactly as provided
- Follow the activation wizard to complete the process

For detailed activation instructions, refer to our comprehensive activation guide.
