Prefer a calmer look? You can change Gridinsoft Anti-Malware’s interface to the **Lite** skin in a few clicks. This only changes how the app looks – your protection and settings stay the same.

01 Quick steps

1. Open **Gridinsoft Anti-Malware**.
2. Click the **Settings** tab in the top menu.
3. In the left sidebar, choose **General**.
4. Open the Skin dropdown at the bottom and pick **Lite** (or **Default** to switch back).
5. The new skin applies instantly.

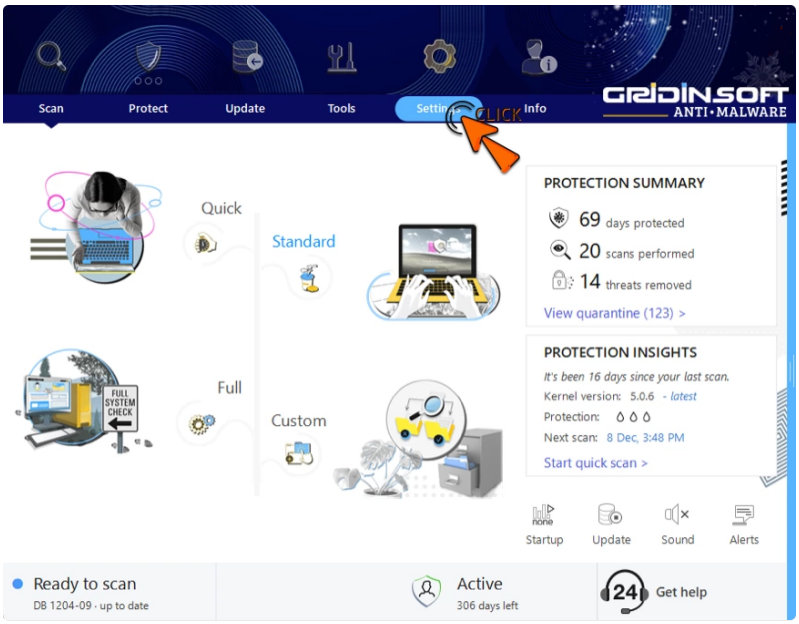

---

02 Step-by-step

1) Go to Settings

From any screen, select the **Settings** tab in the top menu bar.

2) Open General and find UI Settings

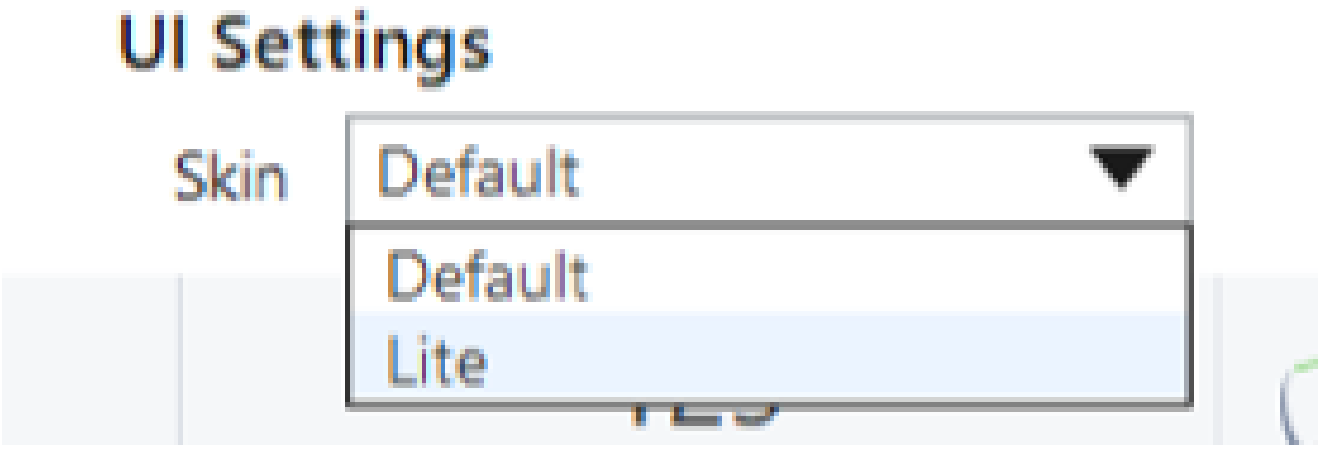

In the **General** section, scroll to **UI Settings**.

You'll see a **Skin** dropdown.

3) Choose your look

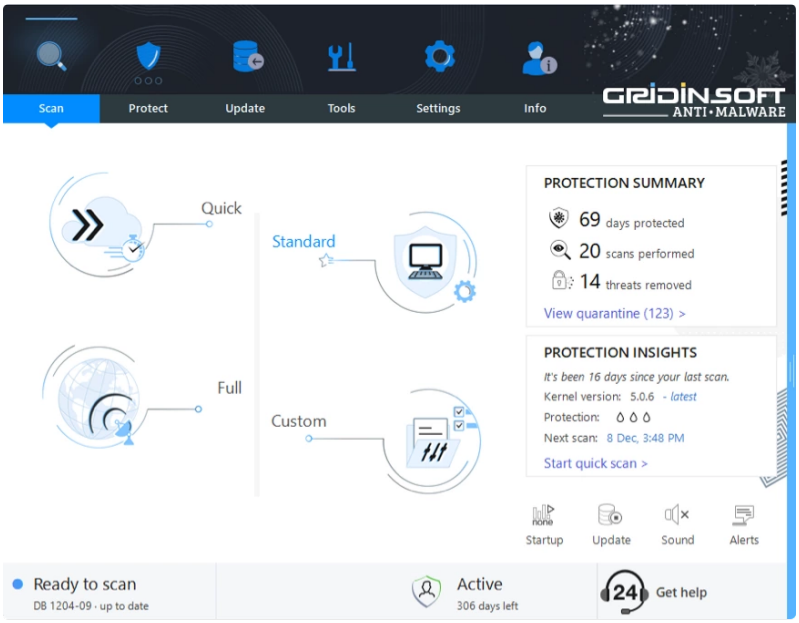

- Select **Lite** for a softer, low-glare look.
- Select **Default** for the original vivid style.

Changes apply right away—no restart needed.

4) Done!

Return to the **Scan** tab to see the updated interface.

---

03 Tips & notes

- **No impact on protection** – skin is cosmetic only.
- **Try it out** – you can switch back anytime.

- **Brightness control** – the Lite skin is designed to reduce visual intensity on bright screens.

---

04 Troubleshooting

I don’t see the Skin option.

Open the **Update** tab and install the latest version of Gridinsoft Anti-Malware, then check **Settings → General → UI Settings** again.

The interface didn’t change after I selected Lite.

Switch to **Default**, then back to **Lite**. If it still looks the same, restart the app once.

Will switching skins reset my settings?

No. It only changes colors and visuals.
