

# Understand and act on scan results

Gridinsoft Help Center

After each scan, Trojan Scanner shows a summary and recommended actions. Here's how to read it and what to do next.

## View your results

- Open Trojan Scanner -> Reports to see your latest scan.
- The card shows: status (completed/paused), apps scanned, duration, date/time, and detections.

## If threats are found

For each item you'll see the name, location, and a suggested action.

- Remove - delete the malicious file/app.
- Quarantine - isolate so it can't run; you can review or restore later.
- Ignore - keep it (not recommended unless you are sure).

Tip: Preinstalled or device-admin apps may need you to disable or revoke admin in Android's App info before removal.

## If nothing is found but something feels off

- Update the threats list, then run a Deep scan.
- Check Settings -> Scan Type and consider using Deep weekly or after installing many apps.

## Keep the threats list current

Open Threats List info to see the last update and the current database version. Tap Update now if it's out of date.

## Where to find past results

All previous scans are listed under Reports. Select a card to view details. You can save or share a log if Support asks for it.

## Adjust how results are kept

In Settings you can choose:

- Keep Reports - how long to store scan reports.
- Sounds/Notifications - alerts for detections and completed scans.

## Quick checklist

- See results -> Remove threats.
- Update definitions regularly (auto-update recommended).
- Still suspicious? Deep scan after updating.
- Manage Reports and Quarantine retention in Settings.
