In this guide

01 Download the installer

02 Transfer it to the Windows PC

03 If the download cannot finish

04 Return to Android protection

Cure my PC helps you obtain a Gridinsoft Windows cleanup tool using your Android phone. It is useful when you want to prepare a download on one device and transfer it to another. The Windows tool is a separate product; it does not run as an Android scan.

01 Download the installer

1. Open **Menu → Additional tools → Cure my PC**.
2. Review the offered Windows download and start it.
3. When Android asks where to save the installer, choose a folder you can find again.
4. Wait for the download to finish before transferring the file.

02 Transfer it to the Windows PC

Use a USB connection or another transfer method you trust. Copy the completed installer from the Android location you chose, then open it on Windows and follow that product's instructions.

The Android phone does not scan or repair the PC remotely. A Trojan Scanner Pro subscription is not a license for separate Windows software; follow the Windows product's displayed access and license terms.

03 If the download cannot finish

- Check your internet connection and available storage.
- Choose an accessible save location when Android's picker opens.
- Retry if the transfer was interrupted; do not run an incomplete download.
- If the problem repeats, contact Support with the error and the Android version.

04 Return to Android protection

Use **Start** to check your phone's installed apps and supported downloads. **Check a file** can inspect a selected download, but a hash check on a Windows installer is not a substitute for running a security tool on Windows. See file check coverage.
