

What exactly does Reset Browser Settings change?

Gridinsoft Help Center

Reset Browser Settings puts your browser back to normal by restoring the homepage, new-tab, default search, and reverting extensions, proxy settings, HOSTS entries, and similar policy tweaks-based on the checkboxes you choose. It does not uninstall your browser or delete personal files. Your bookmarks and saved passwords aren't targeted, but if you select Cookies/History, you may be signed out of sites; and in rare cases a damaged profile or the browser's own reset routine can affect personal data. If you're concerned, quickly export bookmarks or ensure sync is on before resetting-then reinstall only the extensions you trust.
