

What is Applications Usage Statistics in Trojan Scanner for Android?

Gridinsoft Help Center

Applications Usage Statistics helps you find apps you never use (or haven't opened in a long time) so you can safely remove them and free space.

Open the tool

- In Trojan Scanner, tap the clock/history icon on the home screen.
- The list shows each app's last launch time and total time used.

Understand the list

- Never used: installed but never opened.
- Last launch: when you last opened the app.
- Total time: cumulative usage time since install.
- Checkbox: select apps to remove in bulk.

Filter or sort

Tap Show to focus the list:

- Installed, but never used
- Launched before [date] (e.g., older than 30/60/90 days)
- All, oldest at the top

Remove unused apps

- Check the apps you want to remove.
- Tap Uninstall and confirm.

Tip: If an app is preinstalled or device-admin, Android may block removal. Open the app's App info to disable or revoke admin first.

Privacy & permissions

- Trojan Scanner reads usage statistics only to compute last launch and total time.
- No personal content is collected.
- If the list is empty: enable Usage access for Trojan Scanner in Settings -> Security/Privacy -> Usage access -> Trojan Scanner -> Allow.

When to use it

- Free up storage without guesswork.
- Spot stealthy apps you forgot about.
